# WHAT IS AQUALYX FACE?

Born from the legacy of Aqualyx, the world's leading fat dissolving treatment, Aqualyx Face Kit is an advanced system designed to target the unique challenge of the double chin. Providing a more sculpted and defined facial profile.

Discover the revolutionary Aqualyx Face Kit – the ultimate solution for double chin reduction and the culmination of Marllor's 15-years of experience in non-surgical body contouring.

Aqualyx Face Kit is more than just another cosmetic. It is a complete system that includes Seralyx, a highly specific serum containing Physale, a soothing compound with soothing properties similar to corticoids, Resveratrol, with its potent antioxidant activity and a patented mix of low and medium molecular weight hyaluronic acids to improve the cell viability.

Together, Aqualyx Face and Seralyx offer a comprehensive solution for double chin reduction, setting a new standard in non-surgical aesthetics.

## HOW DOES IT WORK?

The first step of the treatment, after the initial consultation, is to deliver Aqualyx Face in the submental area using the same long-standing principles of Aqualyx. But for Aqualyx Face, there is no need for any numbing agent thanks to its special new formulation specifically adapted to the delicate submental region.

Aqualyx Face Kit consists of 2 treatments: Aqualyx Face, which is a PCP free solution with a modified sodium deoxycholate that has emulsifying properties.

Once transdermally applied it reaches the subcutaneous fat at the submental area, and will produce the gradual destruction of the cell membrane of the adipocyte (fat cell), reducing the amount of adipose tissue in this area and therefore, reducing the volume of the stubborn double chin. The swelling that follows is then easily treated and soothed with the application of Seralyx, a state-of-the art serum that contains the perfect combination of flavonoids and hyaluronic acid of different molecular weights that will reduce the inflammation, improve hydration and promote a perfect remodeling of the submental area by direct activation of the fibroblasts.

## WHAT MAKES AQUALYX FACE UNIQUE?

Our medical research department have developed this unique system specifically designed to treat the delicate submental area, based on the experience gathered from 15 years of experience with Aqualyx and the feedback provided by thousands of medical professionals from around the globe. Aqualyx Face Kit provides unique advantages when treating the submental area, including:

- ✓ Precise volume of product per vial, resulting in optimal treatment outcomes.
- ✓ A smoother recovery process for patients, with less downtime, meaning, less swelling and less discomfort post-treatment.
- ✓ No need of any numbing agent, streamlining the treatment process and enhancing convenience for practitioners and patients alike.

## WHO IS THIS TREATMENT FOR?

The ideal candidate for Aqualyx Face Kit is someone healthy, with a normal BMI, presenting with submental fullness unrelated to skin laxity or ptosis of the platysma muscle that wants to reduce this unsightly appearance and, therefore, achieve a more contoured lower third of the face. Aqualyx Face Advance System is not indicated to treat any other fatty areas in the face or buccal fat.
